Over the years, aluminum or aluminum alloy armatures, i.e. armatures composed of an aluminum or aluminum alloy material, have been replaced to a large extent by armatures made of an iron core material. The advantages of armatures made of aluminum or aluminum alloy material are many. For example, aluminum or aluminum alloy armatures have greater electrical and magnetic efficiencies than armatures made of iron, and aluminum or aluminum alloy armatures are lighter than armatures made of iron. In addition to the above advantages, the high tensile strength of aluminum or aluminum alloy materials, in contrast to the relatively low tensile strength of iron materials, enables aluminum or aluminum alloy 81e310abbf
